Answered

BEST BARE-ROOT FRUIT TREES

Presentations and group discussion of the best low-chill, edible plants for the South Coast, including new cultivars!

Why waste time and money on cultivars that won't perform in our area? Learn from the experience of the presenters about which plants give the *most "bang for the buck"*! We'll talk about the good, the bad and the ugly! We'll also explore the importance of rootstocks that can take drought, limit size etc.

Larry Saltzman

Larry and his wife Linda have 130 trees in their 30-year-old Food Forest in Santa Barbara.

Larry has often presented on this topic, and specializes in Mediterranean Food Forests, about which he has also written extensively. He co-founded the Santa Barbara Organic Garden Club and is past President of both the Permaculture Guild of Santa Barbara and the Santa Barbara Ventura Chapter of the California Rare Fruit Growers.

Russ Baldocchi

Russ now has 49 fruit trees, bushes, and grafted cultivars in his thriving home garden.

A horticulture hobbyist and handyman, his self-education in horticulture includes working on certification in the SBC Green Gardener Program. He currently volunteers with Mesa Harmony Garden and SB Botanic Garden, and has been a researcher/scientist in the developmental biology and cancer disciplines since 1986.
